

STEP BY STEP GUIDE

STEP 1: Connect the two curved tubes together to form an oval base (A).

STEP 2: Connect two pairs of Vertical tubes (B) together to form two long vertical poles.

STEP 3: Using a T-Clip (C), connect each long vertical poles to each side of the oval base.
Note the two marks on each side of the oval base.
T-Clips should be positioned onto the marks, then well tightened.

STEP 4: With the unit facing you, position a Left T-Clip with one spring (D) towards the far bottom of the left long vertical pole.
Note: the spring of the Left T-Clip should be facing up, while its plastic nut should be facing back.
Insert a horizontal tube (F) into the Left T-Clip.
Keep the T-Clip loose, do not tighten it yet.

STEP 5: Repeat on the other side, by positioning a Right T-Clip with one spring (E) towards the far bottom of the right long vertical pole.
Connect that T-Clip with the other end of the horizontal tube, then tighten both the Left and Right T-Clips well.

STEP 6: Pick the remaining horizontal tube with pre-installed corners.
Connect it to the top of the unit, by simply inserting the corners into the tubes.

POSTER INSTALLATION

Before inserting a poster, first open the mobile flap on each of the four poster clips, as shown to the right.

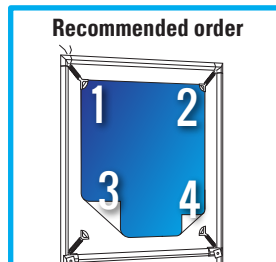

IMPORTANT: The flaps must be open to a full 90°, in order to allow enough space for the poster insertion.

Starting with a top corner of the unit, fully insert a first poster corner into a poster clip.

Secure the poster corner in place by pushing down all the way onto the flap.

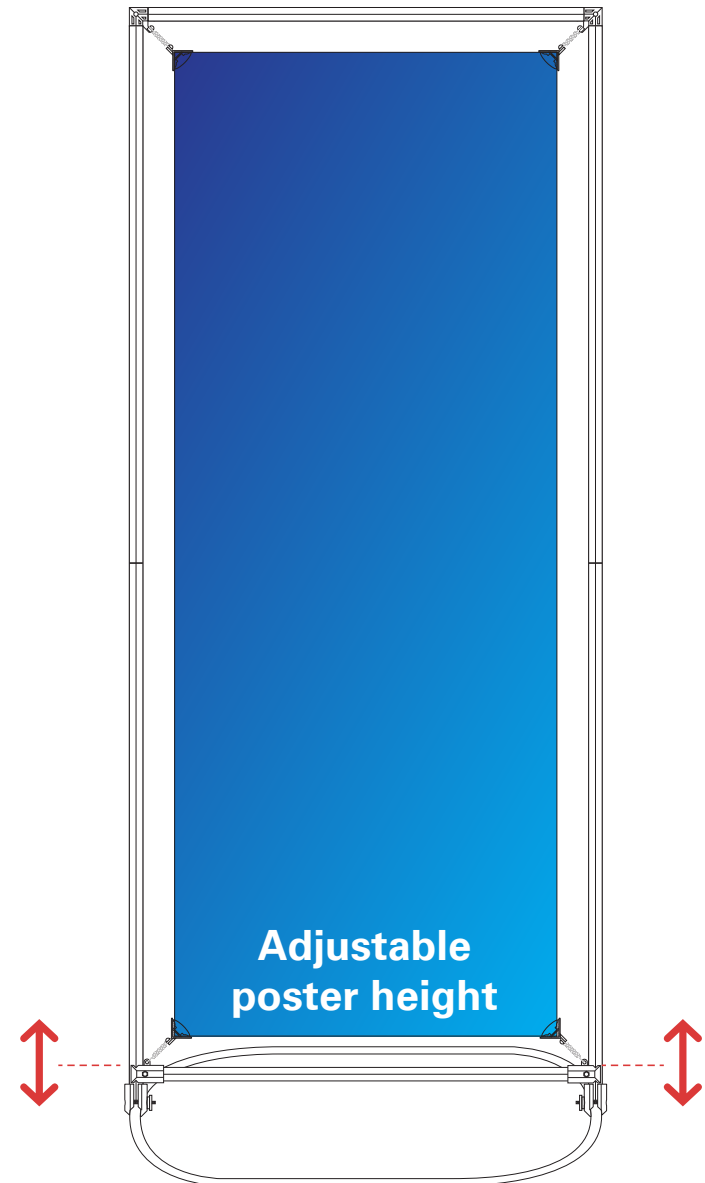

Now, repeat and proceed with the corner beside it, as illustrated to the right.

You may now attach both remaining corners, in no particular order.
